

Evidence-Based Intervention for Children with Speech Sound Disorders *with Caroline Bowen*

Participants will review a range of evidence-based, theoretically sound approaches, procedures and activities that speech and language therapists can apply in working with children with speech sound disorders, in terms of their practicability and efficiency in the 'real' world of clinical practice.

Course Objectives

- 🚩 Select and implement core assessment procedures so as to differentially diagnose children's speech sound disorders.
- 🚩 Choose an appropriate intervention approach or approaches, based on assessment findings.
- 🚩 Identify and implement optimal targets and goals within those approaches.
- 🚩 Consider how some therapies might be modified, where necessary, to suit clinical conditions that do not match the 'research conditions' within which the therapy was evaluated.

📅 28 October and 29 October 2015

🕒 9:00am – 4.45pm

📍 Provide HQ, Area B, 900 The Crescent, Colchester Business Park, Colchester, Essex CO4 9YQ
